

INHERITED METABOLIC DISORDERS AND NUTRITION

Editorial

Dear Colleagues,

We are delighted to announce the launch of the inaugural issue of Inherited Metabolic Disorders and Nutrition (IMDN), the official journal of the Child Nutrition and Metabolism Association. The journal provides a platform for academics to advance scientific research, report rare case studies, and share innovative ideas - all contributing to the growing body of knowledge in our field.

Inherited metabolic disorders represent a critical area of research, with an increasing number of researchers and publications dedicated to this field worldwide. IMDN was established in response to the ongoing need for additional avenues to publish high-quality research in this area. The journal aspires to make a lasting contribution to the fields of paediatric nutrition and inherited metabolic disorders. With the release of the first issue, a strong commitment is renewed to position IMDN as a leading resource within the international scientific community. Over time, we hope that IMDN will become an essential tool for sharing information and experiences related to metabolic disorders and nutrition.

IMDN will be published quarterly and will feature peer-reviewed research articles, case reports, reviews, original studies, and other relevant content. Our editorial board comprises experts from around the globe, and we welcome contributions from our international colleagues.

For more information about IMDN, please visit our website at www.imdn.org. I encourage you to read the first issue with great interest, and I extend my sincere thanks to the authors whose work is featured in it. As a newly established journal, IMDN will undoubtedly thrive with your continued support and contributions.

We look forward to receiving your submissions for future issues.

Best regards,

Nur Arslan
Editor-in-Chief
